Katz Thought Victim of Walking Typhoid Fever.

## MESSAGE IS INCOHERENT

Missing Man Complained of Feeling Ill Before His Disappearance.

Ill Before His Disappearance.

Complained of Illness.

No name was signed to the note. It is believed the missing man wrote the note either Sunday or Monday morning. The fact that he had been complaining of being ill, and the incoherence of the note, together with his apparent loss of memory, lead to the belief that he was suffering from typhoid fever.

Jacob Katz, father of the missing man, went to his son's store, 12th and D streets northeast, today, and while searching a basket which the young man had used Monday, the father discovered a note in his son's handwriting. The note follows:

"Loving father and mother—I have your life. My life. I was your life."

## TROOPS FOR CITIES

Army Council Considers Abandoning Isolated Posts.

## DIVISION ON THE QUESTION

Plans for National Reserve Involved

and No Decision Is Reached at Conference.

at Conference.

The army council at the War Department has been considering that part of the reorganization project which involves the quartering of regiments directly in the cities instead of at isolated army posts, as at present.

Incidentally this involves the even more important question of a national reserve, as it was urged that by keeping a given regiment permanently in some great city, which might be regarded as its home, the men discharged after serving one term of enlistment might be expected to remain in the vicinity of the regiment, at the place where they were recruited, and thus constitute an effective and easily reached reserve. No decision was reached on the merits of the two systems of quartering troops, and the discussion will proceed.

The primary purpose of these conferences is to harmonize military sentiment first and legislative sentiment secondarily to the end that all legislation affecting the army may be in harmony with a basic policy which shall have the cordial approval of all army officers and the sympathy and support of all members of Congress.

Army Officers Disagree.

One serious obstacle which every Secretary of War has had to encounter has been the wide diversity of opinion among army officers, which has enabled certain of the military committees hostile to any plan to secure expert testimony in opposition to the times of the Secretary. Mr. Stimson believes that by means of these conferences, at which every phase of the proposed legislation will be thoroughly digested and discussed, and at which every officer who desires will be afforded an opportunity to express his views, the army sentiment will be coordinated.

By inviting members of Congress to be present the Secretary hopes to gain the benefit of their advice and to enlist their sympathy for the broad policy which has, from the time of the late Secretary, been the basis of the proposed reorganization.

There is no expectation that any general scheme of legislation embodying the features of this plan will be enacted at this session of Congress. On the other hand, it is expected that in framing this year's army bill members of Congress shall have the proposed plan in mind and shall so far as possible have a positive opinion embodied in that bill anything at variance therewith.

Purpose of Secretary Stimson.

If Mr. Stimson can once effect a harmony of view between the military authorities and those charged with the responsibility of legislating for the army he will have accomplished wonders, and after that each succeeding army bill will embody some steps toward the broad end which he has in view.

One of the features of the plan which is now criticized at the Capitol is the experimental organization of a supply corps, to be composed of the quartermaster, subsistence and pay departments. That is a provision on permanent basis in the pending army bill, and it is believed it will be enacted unless the President again vetoes the army appropriation bill.

The new proposition is to have this corps established on a temporary basis for two years. This is not favored by the military authorities, who think the plan impracticable.

Reserve Force Criticized.

Another feature which is criticized is the provision for a reserve force. Senator du Pont, chairman of the Senate military committee, was present at the War Department conference Tuesday and announced that he did not approve of the scheme of short enlistments and the maintenance of a reserve force which pays members so much a month and holds them subject to call to the colors.

There is, it is said, a feeling, however, a surprising diminution of the opposition to the plan.

Senator du Pont believes reservists should receive no pay until they return to the service and are accepted, when they would receive a bonus of \$100 a month compensation for the period they have been out of the service, not exceeding \$1,000.

It would be possible to regulate payments for the reservists who are available for duty and who present themselves. The plan would mean that War Department would have the trouble of keeping track of members of a reserve corps.

These two features may be somewhat modified to meet Congress criticism. There is little in the plan, however, which is not subject to modification if some better method can be suggested.

WILSON REPLIES TO AKIN.

Secretary Assures Congress of Non-participation in Colorado Project.

Reply to the resolution introduced by Representative Akin of New York, asking Secretary Wilson of the Department of Agriculture for his alleged support of a land project in Colorado is made by the Secretary.

"My son Jasper," he said, "is working for an irrigation company near Denver, but I know nothing whatever about the company. The government has not been brought into contact with the company in any way. Not a penny of government money has been expended in connection with the project, and the committee desires me to appear and say that I know nothing I am perfectly willing to do so."

Farmers Getting More for Products.

The farmers of the country were being paid more by 17.5 per cent, for their products July 1 this year than they received last year at that time, Victor H. Olmsted, chief of the bureau of statistics, Department of Agriculture, announces. This increase in prices was the average of crops which represent about three-fourths of the value of all crops of the nation.

## Maker's Sample Line of Parasols Offered Saturday at Unheard-of Prices.

A big special underprice purchase of a manufacturer's samples of Parasols on sale tomorrow for less than such pretty styles and fine qualities have ever been sold before.

Women's Silk Co. Parasols, of fine quality, tulle, lace, and other materials, including light, medium and dark grounds, stripes, figures, dots, etc. Made in coat style, with cuffs attached. Some with soft collars attached. ALL SIZES. Values actually worth \$1.00 and \$1.50 for 50c.

## Men's High-class Shirts.

Strictly Perfect Quality Negliges, 50c Sold Regularly at \$1.00 and \$1.50, 50c

This remarkable shirt sale is proving one of the biggest and most largely attended events of its kind ever known. Small wonder, when you consider the extraordinary savings offered and the high character of the shirts.

They represent a maker's entire overproduction of six hundred dozen shirts—all fresh laundered, brand-new and of the highest quality materials and workmanship. Not "seconds," but STRICTLY PERFECT.

Materials consist of French percales, Scotch madras, pique and set in a large assortment of refined patterns, including light, medium and dark grounds, stripes, figures, dots, etc. Made in coat style, with cuffs attached. Some with soft collars attached. ALL SIZES. Values actually worth \$1.00 and \$1.50 for 50c.

## Our Entire Stock of Men's Suits.

Sold at \$20.00, \$22.50 and \$25.00 for . . . . . \$4.65

A choice-of-the-house sale of Men's Finest Quality Summer Suits that brings you the greatest clothing values known this season. Nothing has been reserved. You can walk into our Men's Clothing Department tomorrow and pick out any suit in the stock, no matter whether the original price tag was \$20.00, \$22.50 or \$25.00, and all you will have to pay is \$4.65. The law of the store that compels a complete clearance of all clothing in the season for which it was bought must be carried out to the letter.

At \$4.65 choice of finest quality Hand-tailored Suits, of imported and domestic worsteds, fancy unfinished worsteds, fancy blues, browns, grays, mixtures and novelties, silk striped effects and navy blue serge. Two and three piece models. Coats lined with cool mohair alpaca. No finer quality garments can be bought anywhere. Sizes 32 to 46 in the lot, including suits.

## Any Man's Straw Hat

Double-breasted style, with full cut knickerbocker pants. Summer-weight fabrics in light patterns. Sizes 7 to 17 years. Sale price—\$3.45.

Final cut on Men's Straws. Choice of any hat in our stock, worth up to \$2.50, offered Saturday at 80c. The price of a new straw hat is so little you will want to cast aside the hat that is beginning to get dingy and replace it with a fresh, new one.

Choice of all the most popular styles and shapes in a complete range of sizes to fit all heads. (Men's Clothing Dept., Second Floor.)

## Boys' \$5 to \$7 Suits

Reduced to \$3.45 Each

If your boy needs a new suit now, or expects to need one any time this season, you cannot afford to pass up this great Saturday Sale. Unreserved choice of any Boy's Fancy Cassimere Suit in the house, formerly sold at \$5.00 and \$7.00, offered at \$3.45. Fine quality materials, including double-breasted style, with full cut knickerbocker pants. Summer-weight fabrics in light patterns. Sizes 7 to 17 years. Sale price—\$3.45.

## Women's Wash Dresses.

\$7.50 to \$12.50 Values, \$3.69

Not for the low price alone, but because of their unusual style, charm and fit, these wash dresses are the most remarkable values offered anywhere. Cool and stylish summer frocks, suitable for any summer occasion—dresses for morning, afternoon or evening wear and to take away on your trip to the seashore or mountains.

Materials of the finest sort, such as all-over embroidery, French-lingerie cloth, imported woven tulle, French voiles, marquisette, striped voile, tulle, lace, French linen, etc. Fascinating styles, certain to meet every requirement. Sale price—\$3.69.

## Summer Ribbons Lowered.

## AMERICA'S GREAT ENDOWMENTS.

The Carnegie Institution's Work.

By Frederic J. Haskin.

No other part of the work of the Carnegie Institution of Washington has a greater fascination for its founder and his associates than the study of the earth and the sun. In the little space available here it is impossible to tell even a tenth part of the work that the Carnegie Institution is doing. But with the completion of the new 100-inch reflector telescope of thousands of new stars are expected to stand revealed to human knowledge.

Perhaps no part of the work of the Carnegie Institution is better known than that undertaken by the department of terrestrial magnetism, which includes a magnetic survey of the entire earth. It was for the work of this department that the Carnegie was fitted out, in whose construction not a pound of iron or steel was employed. Observations of the magnetic elements of inclination, dip and intensity have been made on all the continents, and over many thousands of miles of the ocean. The information already brought out has proved of much benefit to navigation, and incidentally has thrown new light on many of the problems of terrestrial physics. The Carnegie traveled over 23,000 miles last year, and did much work in many lands.

The significant part of this work was that many and unsuspected errors were found in the magnetic data of the Indian ocean, for instance, it was found that many of the recently issued sailing charts were as much as four or six degrees in error in their "compass readings," an error which in these days of precise navigation is a most serious one. The Carnegie has covered nearly 150,000 miles in its travels, and has laid the foundations for much new work in the future. Just as soon as compass variations are found, the hydrographic offices of the world are notified, so that shipping may enjoy the fruits of these discoveries.

Last year the department of meridian astronomy did some important work in Argentina. As a result a stellar catalogue of the southern hemisphere, giving the precise positions of all the southern stars over a large area of the sky, was prepared. Perhaps one of the most interesting discoveries in connection with the work in Argentina, however, was the discovery that the stars in that constellation were moving away from the earth toward the red.

Just as we are able to tell by the change of pitch whether a locomotive whistle is coming toward or away from us, so the astronomer is able to tell the direction of the travels of the stars by changing light waves coming toward or away from us.

Tell Star's Direction going away from the astronomer is able to tell the direction of the travels of the stars by changing light waves. The Mount Wilson observatory studies are demonstrating new facts about the movement of great streams of stars through the universe. Some show by an analysis of their light waves that they are composed of the same materials as the earth and the sun. Others seem to have a different composition. All the stars in one great special stream are traveling in the same direction. In the little space available here it is impossible to tell even a tenth part of the work that the Carnegie Institution is doing. But with the completion of the new 100-inch reflector telescope of thousands of new stars are expected to stand revealed to human knowledge.
